

MEGATHON HACKATHON · AMSTERDAM 2026

THE MEGATHON RACE

Describe your dream car in one sentence. We build it in 3D.
Then you race it to the finish line.

Text & voice → 3D

Generative AI

Playable in-browser

THE PROBLEM

Making 3D is slow, costly, and locked behind expert tools.

Steep skill barrier

Modeling a single asset in Blender or Maya takes hours and years of practice most people don't have.

Too slow to iterate

From idea to a usable, textured 3D model is a multi-day pipeline — not a creative, real-time loop.

Then it just sits there

Even once you have a model, doing something fun and interactive with it needs a whole engine and a team.

THE SOLUTION

One sentence in. A playable race car out.

Type — or speak — what you want. The Megathon Race turns it into a real 3D model in seconds, drops it into a 3D studio to preview, and then puts you on a track against live rivals.

- ▶ No tools, no skills, no install — just a browser.
- ▶ Generation → preview → race in a single flow.
- ▶ Your words become something you can actually play.

HOW IT WORKS

Four steps, one continuous flow.

STEP 01

Describe

Type or use voice dictation:
“a low neon street racer
with a carbon wing.”

STEP 02

Generate

An AI text-to-3D model
returns a real, textured car
as a downloadable GLB.

STEP 03

Preview & refine

Inspect it in an interactive
3D studio with orbit,
lighting and shadows.
Tweak the prompt to refine.

STEP 04

Pay & race

Unlock with one payment,
then race 3 rivals over 3
laps with live ranking.

From prompt to 3D model.

- ▶ Text or hands-free voice input.
- ▶ A polished “build viewport” loader visualizes the car being generated.
- ▶ Real-time 3D preview once the model is ready — orbit, zoom, relight.

Then take your car to the track.

A full arcade racer in the browser — Megathon-branded stadium, crowd, 3 AI rivals, 3 laps, live position & speed HUD, and a real finish line.

Built end-to-end in one weekend.

AI & 3D

WaveSpeed **Hunyuan3D** text-to-3D generation · **three.js** + React-Three-Fiber for the studio and the racing engine · GLB/GLTF models.

App & UX

Next.js 16 (App Router) · **React 19** · TypeScript · Tailwind v4 · Framer Motion · **Vapi** voice dictation.

Payments

Mollie checkout to unlock the download & race — pay-per-car, ready for live keys.

Architecture

Server routes generate & cache models; client renders 3D. Race sessions are storage-backed behind a swappable interface.

WHY IT MATTERS

Prompt-to-playable unlocks more than racing.

Gaming

User-generated vehicles & assets, created in seconds by players.

E-commerce

Instant 3D product mockups and configurators from a description.

Marketing

Interactive, brandable 3D experiences for campaigns & events.

Education & prototyping

Turn ideas into tangible 3D objects with zero modeling skill.

BUSINESS MODEL

Pay to play.

- ▶ Pay-per-car to unlock the download + race (Mollie).
- ▶ Future: subscriptions for unlimited generations.
- ▶ Marketplace & B2B API for embedding prompt-to-3D anywhere.

ROADMAP

- ◆ Cloud model storage for production-scale serving.
- ◆ Multiplayer races & shareable car links.
- ◆ More vehicle types and full track editor.
- ◆ Leaderboards & tournaments.

THANKS, MEGATHON AMSTERDAM

Describe it. Build it. Race it.

The Megathon Race turns a sentence into a 3D car you can actually drive — the fastest path from imagination to play.
